5 SECURITY TIPS

1. Refresh passwords
2. Question emails
3. Clean desks
4. Limit access
5. Stay up-to-date

“True cybersecurity is preparing for what is next, not what was last.”

The Reality

In March Atlanta lost critical systems to a cyberattack that cost the city \$2.7 million in emergency contracts.

Local governments are vulnerable to malware, phishing, ransomware, and other nefarious attacks.

The Solution

Continually train and refresh government employees on cybersecurity best practices. Enforce these 5 simple security tips to secure valuable data and minimize your risk of cyber-attacks.

1. Refresh Passwords

A lock is only as strong as its key. Ensure passwords are routinely renewed and meet strict security protocol.

2. Question Emails

Stop and think: would this person normally email this content at this time? If suspicious, call the source.

3. Clean Desks

Sticky-note passwords under keyboards are NOT safe. Store printed data under lock and key. Routinely clean and organize workspaces.

4. Limit Access

Employee access to digital information is more critical than access to physical offices. Cordon off sensitive data and limit access to only those cleared and monitored.

5. Stay Up-to-Date

Best practices in technology change rapidly. Ensure latest anti-malware solutions are up-to-date. Ask IT if you are unsure. Security depends on the knowledge and actions of every employee. Regularly reminding staff of best cybersecurity practices is critical to securing your sensitive systems and information.

“It takes years to build a reputation and a few minutes of cyber-incident to destroy it.”

VADAR® Secures Your Data

Financial and resident data are critical to protect. Here are some of the many layers of security VADAR Cloud™ uses to secure your vital information.

1st Class Encryption

We maintain commercial-grade best practices of end-to-end encryption and security.

No Email Access

Our financial systems are completely separated from email and operating systems.

Separate Silos

Municipal databases are walled off and inaccessible from other cities and towns.

Limited Access

Each employee access is configured at the account level with limited permissions.

Backups

All data is backed up multiple times a day. Free disaster recovery is included.

Data Vault

Our 1st class data center is guarded by iris scan, mantrap, 24x7 surveillance, and more.
